

Press Pad - P6200

SCHWAN Expert Sheet

The main advantage of the P6200 is the high cushionability and pressure equalization inside the cassette. This advantage prolongs the lifetime of the pad, lowering the production costs. Constant quality performance for several months.

Technical Details:

- Material: 2 layers of silicone rubber, 1 layer of glass fabric
- Surface: Top and bottom structured
- Max. Temperature: 250 °C
- Rebounding level up to 99%
- Compression: Thickness remains over the complete lifecycle
- Application: PCB, PVC, PC, ABS, PET(G), etc.
- Available Thickness in mm: 1.9, 2.3, 2.7, 3.3.

Customized
Sizes

Excellent heat
conductivity

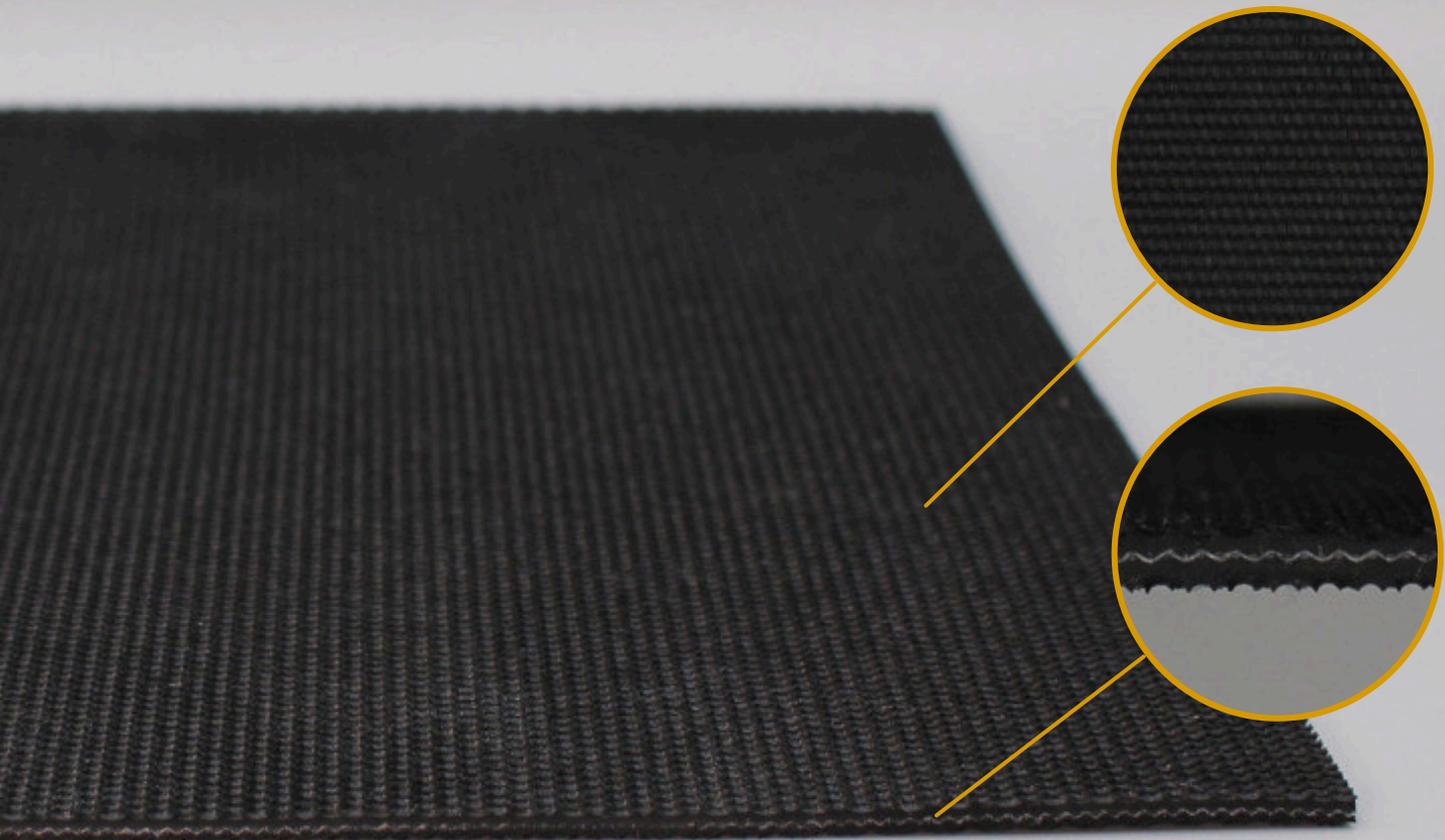

Production in Viersen,
Germany

Press Pad - Black Swan P6200

SCHWAN Expert Sheet

The Black Swan 6200 is the black edition of our P6200. Thanks to an enhanced silicone formula, the press pad is less susceptible to condensation. The black color not only conceals fingerprints but also guards against other labor-related dirt. It ensures consistent cushioning and excellent pressure equalization as well.

Technical Details:

- Material: 2 layers of silicone rubber, 1 layer of glass fabric
- Surface: Top and bottom structured
- Max. Temperature: 250 °C
- Rebounding level up to 99%
